TEACHER KEY · LESSON 4

Model answer

Laptop B, because 8 GB of RAM handles video calls and a browser with several tabs better than 4 GB, and the SSD starts faster and survives being carried. The limitation is the price: it costs 360,000 MMK more, and 512 GB is less storage than 1 TB.

Accept Laptop A with a defensible reason (budget, storage capacity) and a named limitation (slow HDD, 4 GB RAM). The mark is for the reasoning, not the product.

Numbers, explained

SPECIFICATION	WHAT IT MEANS
2.3 GHz, 6 cores	Cycles per second and parallel workers. One indicator, not the whole story.
8 GB RAM	Workspace while running. Cleared when the power goes off.
512 GB SSD	Permanent capacity, no moving parts, faster than an HDD.
